

# Visitors & Guests to EMU

## Computer access

University guests who would like access to an EMU computer will need to be sponsored by an EMU employee. This can be done through the [guest web application](#). This account information will be valid for one week and may be used only by the guest to whom it was issued. It may not be shared.

Community guests should request a guest login from the Library Reference Desk.

Faculty & Staff: Use the [guest web application](#) to generate an account for your guest on the spot. This functions from on-campus only.

Students can request logins for their guests from the student life department.

If you are involved with a program or event that brings a large number of guests on campus, contact the Helpdesk for alternate arrangements.

## Wireless Configuration

Guests can connect to wireless by going to a web browser and following the directions.

1. Connect to the wireless network EMU-Guest (your device should do this automatically). If your computer does not have a wifi adapter, students may get one for free from the IS Helpdesk.
2. Try to browse to any web site. Your device will display the following page. (Your device may do this automatically).

### Student and Employee Access

Students, employees, and others with an EMU login can set up their own devices to connect to the network.

### Open Guest Access

Guests may request a login to the guest network.

## Projection Systems

Make sure to bring any needed video adapters for your laptop if you are planning to connect to a projection station on campus. We will provide a VGA cable connection but some laptops (most Macs) need to have a special adapter to connect in this way.
