

Windows Drive Mapping

EMU-owned computers running Windows should automatically map the network drives that you have access to. For access from a non-EMU owned computer use the following instructions:

1. Download the [Windows drive mapping script](#).
2. Double click the script to run it.
3. Enter your Royal username and password, click "ok". When the password prompt disappears your network drives will be available.

Note: The H drive will list all departmental drives you have access to.
